

Oleg Boyko

AI Automation Engineer

 oleg.boyko.02@list.ru |  [LinkedIn](#) |  [GitHub](#)
 Moscow, Russia · Open to remote work worldwide

About me

I build AI pipelines that do the heavy lifting instead of people. I connect n8n, ComfyUI, and local LLMs to automate content creation and data processing. I came from graphic design, so I understand both the creative and the technical side. Right now I'm looking for a remote AI Automation role in an international team.

What I work with

- ComfyUI – everything from basic generation to complex workflows with ControlNet, LoRA, upscaling, and video.
 - n8n – I design full automation chains, connect APIs, parse data, and make systems work without human touch.
 - Local LLMs – I run models like Phi-4 and Qwen in LM Studio, write strict prompts, and integrate them via API.
 - Python and JavaScript – enough to write scripts for n8n, process data, and talk to APIs.
 - Docker, Git, Google APIs, Postman – tools I use daily.
 - Photoshop, Lightroom, Figma – my design background, still handy.
-

Projects

1. Automated E-Commerce Product Card Generator

- Pipeline that turns a product name into a photorealistic image ready for a marketplace.
- Uses n8n, a local LLM, and ComfyUI.
- **Result:** Card creation time dropped from 1 hour to 2 minutes.

2. Autonomous AI Social Media Agent

- Telegram bot that takes a topic (e.g., "orange fresh juice") and returns a set of branded images with captions.
- LLM generates prompts, ComfyUI creates images, everything runs automatically.
- **Result:** Replaces 80% of manual work for social media visuals.

3. Real-Time Customer Feedback Analyzer

- Webhook receives a review, local LLM analyzes sentiment and extracts key topics, results land in Google Sheets.
 - No manual sorting needed.
 - **Result:** Feedback processing time reduced by 95%.
-

Experience

Freelance AI Automation Engineer (2025 – present)

- Building automation workflows for e-commerce and marketing.
- Integrating n8n, ComfyUI, and LLMs to replace manual content production.

Graphic Designer & Retoucher (2023 – 2025)

- Photo editing and design for agencies and clients.
 - Started using AI to speed up routine tasks – this is how I got into automation.
-

Education

- College Degree in Graphic Design (2025)
-

Languages

- Russian (native)
 - English – B1 (read and write comfortably, speaking is improving)
-
